

# Confirmation

Ulm, 28/04/2014

To whom it may concern

We herewith confirm that our product

**UZIN PE 260 Multipurpose Primer**

neither contains carcinogenic nor sensitising volatile substances.

**UZIN PE 260** meets the requirements of "very low emission" products (EMICODE EC 1 PLUS) according to the criteria of the GEV (Association for the Control of Emissions in Products for Flooring Installation, Düsseldorf, Germany). Products labeled with EMICODE

EC 1 PLUS have passed a specific test-chamber measurement performed according EN ISO 16000-9 and emit less than 60 micrograms of VOC per m<sup>3</sup> after 28 days. EC 1 PLUS-products thus stand for modern, solvent free and extremely low emission flooring installation materials. In respect of Indoor Air Quality, they provide the most ecological method for state-of-the-art flooring installation.

The use of carcinogenic substances is prohibited in products labelled with the EMICODE.

Isocyanates or other sensitising volatile substances are neither used in **UZIN PE 260** nor have they been detected in the test-chamber measurement. Thus, substances prohibited in BREEAM requirements for Flooring adhesives – Hea 9 - Volatile Organic Compounds are neither used nor will be emitted from **UZIN PE 260**.

We confirm that **UZIN PE 260** does not contain substances that can decompose to isocyanates or to other sensitising substances.

**UZIN PE 260** is therefore perfectly suitable for all construction projects with highest demands on Indoor Air Quality, as defined for example in BREEAM section "Flooring adhesives – Hea 9 - Volatile Organic Compounds".

We hope this information supplies you with the support you require. In case of further questions please do not hesitate to contact us.

Sincerely

**UZIN UTZ AG**
