

Confirmation

Ulm, 07/01/2014

We herewith confirm that our product

UZIN U 1000 Anti-Slip

neither contains carcinogenic nor sensitising volatile substances.

UZIN U 1000 meets the requirements of "very low emission" products (EMICODE EC 1^{PLUS}) according to the criteria of the GEV (Association for the Control of Emissions in Products for Flooring Installation, Düsseldorf, Germany). Products labeled with EMICODE EC 1^{PLUS} have passed a specific test-chamber measurement performed according EN ISO 16000-9 and emit less than 60 micrograms of VOC per m³ after 28 days. EC 1^{PLUS}-products thus stand for modern, solvent free and extremely low emission flooring installation materials. In respect of Indoor Air Quality, they provide the most ecological method for state-of-the-art flooring installation.

The use of carcinogenic substances is prohibited in products labelled with the EMICODE.

Isocyanates or other sensitising volatile substances are neither used in **UZIN U 1000** nor have they been detected in the test-chamber measurement. Ammonia is not used in **UZIN U 1000** and therefore cannot be released into the indoor air. Thus, substances prohibited in BREEAM requirements for Flooring adhesives – Hea 9 - Volatile Organic Compounds are neither used nor will be emitted from **UZIN U 1000**.

UZIN U 1000 is therefore perfectly suitable for all construction projects with highest demands on Indoor Air Quality, as defined for example in BREEAM section "Flooring adhesives – Hea 9 - Volatile Organic Compounds".

We hope this information supplies you with the support you require. In case of further questions please do not hesitate to contact us.

Sincerely

UZIN UTZ AG

Dr. Michael Zieger
