To whom it may concern

Re: information on FIS SB 390 S, FIS SB 585 S and FIS SB 1500 S

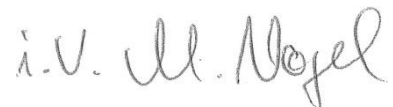

The fischer injection systems FIS SB are high performance products for heavy duty chemical anchoring. The products are made in Germany under highest quality standards. All raw materials are listed in the TSCA inventory. The products do not contain any Rapidly Renewable Materials and the proportion of post-consumer or post-industrial raw materials is unknown. The products feature an extremely low VOC, a value of less than 1 g/L (according to LEED 2009 EQ c4.1, ASTM D 2369-10) can be guaranteed.

According to Federal EPA Standards, FIS SB is not regulated as hazardous waste in the US. Since the regulations of disposal of non-regulated industrial waste are not harmonized, the local and state regulatory agencies should be contacted for direction on disposal. The energetic recycling of the products in a waste incineration unit is possible.
