

Water Stops

When using a recoverable anchor with a plastic or fiber concrete sleeve, we recommend using a cast Water Stop for a water and gas tight tie point. Water Stops are certified for watertightness up to 7 bar in accordance with DIN 1048. In order to seal the tie point even more easily and more securely, we recommend using a Water Stop Type N.

It consists of a cold rolled anchor bar with a welded-on metal plate and an optional bentonite sheet that is glued on.

Water Stop Type N

Article No.	Bar Ø [mm]	Plate Size [mm]	Weight [kg/pc.]
15 FS 3043	15	120 x 120 x 2	0.20
20 FS 3043	20	120 x 120 x 2	0.20
26 ES 3043	26.5	120 x 120 x 2	0.20

Only plate without Threadbar; Threadbar must be ordered separately

Calculation of bar length:

Bar length = wall thickness minus double concrete cover of cone
